Outdoor Stainless Steel Supplies / Marshalling Kiosk

Delvalle is a world-class manufacturer outdoor Marshalling Kiosks for deployment in electrical substations switchyards, power transformers and many other outdoor applications.

Marshalling panels provide cross wiring functionality between field instruments and the control system. Are used to provide convenient connection points for the various control, protection and instrumentation wires which are used in different substation plants; this includes power and instrument transformers and switchgear equipment.

Delvalle ensures best design by factoring in data and various inputs, by having this type of interface, input and output issues can be quickly identified and maintenance personnel can perform routine functions in the field without jeopardizing the heart of the control system.

Marshalling panels incorporates a host of safety and convenience features, ensuring simplicity of installation, maintenance and commissioning with safety of operator and equipment.

Delvalle will customize the junction box or marshalling cabinet panel to fit the specific requirements of your project, whether you are terminating field instruments on a skidded package or require hundreds of I/O in a control room environment.

Delvalle Marshalling Kiosks are custom designed for each individual application, the design process ensures that the correct amount of equipment is included for both the current application and also for any future expansion that may be required.

The Marshalling Kiosks can be provided with front and rear access or in some applications front only access where substation space may be limited.
